In partnership with FINASTRA

Accelerate Kondor releases with RightClick TMS

Remain agile in an ever-shifting financial market and increase the quality of your Kondor releases by introducing test automation into your release process. Pre-tested with Kondor, you can start automating your tests from Day 1.

✓ **Intuitive solution**

✓ **Reliable & secure**

✓ **No technical skills required**

✓ **Pre-tested with Kondor**

✓ **Easy to expand to any application**

We've built a scalable no-code solution that empowers non-technical teams to accelerate Kondor testing & increase the quality of the release cycles at a reduced maintenance cost. All without the need to code.

01
Accelerated and accessible automation

It's time to experience automation of your testing processes. Leverage powerful AI capabilities to effortlessly create reusable automated tests within minutes.

02
Accessible to non-technical teams

Simplify your Kondor testing process with our no-code testing solution, designed to empower non-technical teams. No scripting or technical skills are required.

03
Streamlined and scalable test portfolio

Seamlessly manage and adapt test cases to meet your requirements with RightClick TMS. Integrates with ALM and Jira, and includes an intelligent comparison tool.

Proven to reduce testing efforts by up to
70%

- Fast cost savings
- Higher predictability of test cycles
- Accelerate time to value
- Reduce risks & human errors
- Improve quality & compliance
- Drive business agility

Revolutionize your Kondor testing journey

UI Driven Testing

Validate end-to-end business workflows by automating user interaction with the system and setting pre-defined success criteria.

Backend Testing

Create API tests, scripts and other executables and integrate them in your tests to validate system functionality.

Batch Testing

Execute batch jobs and compare the results with powerful automated comparison capabilities that make it easy for you to analyze true differences.

Regression Testing

Execute tests and compare results between two versions of your system. Pre-tested with Kondor.

Interface Testing

Automate interaction between multiple systems and validate results from your upstream and downstream systems.

SIT/UAT Testing

Combine automated GUI tests, API tests, reports, utilities, query databases, and scripts to cover a full workflow across multiple systems.

We speak automation

With decades' worth of test automation expertise at your service, we deliver cutting-edge automation tools and services. Our team helps companies around the world to build, maintain, and scale automated testing for their mission-critical software.
